

Evolution of ERP - How Far Have We Come!

Enterprise software landscape has undergone a sea change in the past decade or so. By the mid of 1990, ERP solutions leaped out from the manufacturing units to other sectors/departments covering key functions such as maintenance, aftersales, inventory, human resources, ecommerce, etc. As of today, ERP systems are available with advanced functionalities, features and usability than ever. All thanks to technology and evolving user demands.

Here's how the **enterprise resource planning** landscape has evolved over the years:

The Beginning

ERP systems have been there since the 1980s aimed at big businesses to help with accounting and finances. The systems then were expensive yet complex to use.

Modular & lightweight infra

These types of micro ERP offerings took over the complex and large enterprise systems by breaking them up into smaller modular components.

ERP in the 1990s

1990s was all about inter-functional ERP integrations. Yes, these systems seamlessly integrated accounting, distribution, inventory, logistics and so on.

ERP in the 21st century

Coming to the 2000s, ERP ecosystem witnessed the introductions of several add-ons like supply chain, business intelligence, smarter reporting, CRM and so on.

ERP today

ERP systems have come a long way! Today, these come armed with built-in intelligent, integrated security, faster updates, cloud/mobile friendly, data-driven and modular.
